Foamy is a family of seating sculptures made of EVA (Ethylene Vinyl Acetate) foams. The stools are lightweight, float in water and are usable in a multitude of ways. The range features the Y-Stool, a set of two tables, as well as the 'Honey' range of pop sculptures. Innovative and highly playful, the Y-Stool can be used at two different heights: one height being suitable for dining and working, while a lower height is ideal for lazy lounging in a living room.

FOOMY: FUNCTIONAL POP-SCULPTURES

HIGH PRESSURE LAMINATES

Some patterns of the wallpaper collection are also available as HPL (High Pressure Laminate) sheets. The laminates are suitable for furniture such as countertops, desks, and partition walls amongst other architectural elements. The combination of wallpaper and laminates, in the same pattern, leads to an optical fusion of the space designed.

THE COLORFLAGE RANGE

The Colorflage series is an innovative range of wallpapers, paints, fabrics, furniture and lamps; designed as a flexible tool that combines the creative energies of graphic design, product design and architecture into realising a space. Brainchild of Markus Benesch, the range weaves a pattern between architectural space and the elements interspersed in it.

COLORFLAGE WALLPAPERS

Featured here is the Colorflage Wallpaper range which focuses on three-dimensional graphics and illusions, ceiling-high colour twirls and artificially induced neon light effects. The special effects can be put in the repetitive strips at will, thus allowing for flexibility in design. Aisles, corridors and flat, bland walls can be induced with a sense of dynamism with these synthetic wallpapers, available as strips of maximum width 0.465m. The print strips are available in wall heights of 3m or more.
